

YOUR FLORETTE

Mogra

- The scientific name of Mogra is *Jasminum sambac* and it belongs to family Oleaceae.
- It is a small shrub with short stems and leaves that have wavy edges.
- It can also be grown as a short climber which produces beautiful, heavily scented white flowers that are grouped together in clusters of 3 to 12 flowers.
- These flowers can be single, partially double, or completely double, which means they can have many layers of petals and look very full and lush.

Care Tips:

- **Light:** Provide bright, indirect sunlight.
- **Watering:** Keep the soil moist, not soggy; water when the top inch of soil is dry.
- **Humidity:** Maintain higher humidity levels by misting or using a tray of water and pebbles
- **Fertilization:** Feed with a balanced fertilizer during the growing season.
- **Pest and Disease Control:** Watch for pests and treat promptly with appropriate measures
- **Winter Care:** Protect from frost, reduce watering during winter, and consider indoor placement.
- **Manuring:** Plenty of well-rotted farmyard manure is added to the potting soil after pruning a plant, along with NPK fertilizers.

Period of Growth :

15

approximate days
required to first blossom

1

one medium sized
mug daily.

3-4

times fertilizers
yearly.

"The environment is home to countless living things. Its beauty is unparalleled. We must do everything we can to protect it."
